** Item numbers 15, 16 and 17 require a total end play adjustment of +0.002 (loose) to +0.006(loose). This should be done by placing both bearing cones into the gear assembly, then into the housing, and quickly counter-rotating the gear to seat the bearings, then measuring the overall space available for the proper shim part number selection (item #17). Shim is to be installed on input gear side as shown.

Torque Values: 5/16" Capscrew - 18 ft.lb.; 1/4" Set Screw - 5 ft.lb.; Plug (item #18) & Lube Port (item #19) - 35 ft.lb.
